

FOR IMMEDIATE RELEASE
August 10, 2015

Mill Brook Evaluation – Stream Assessment

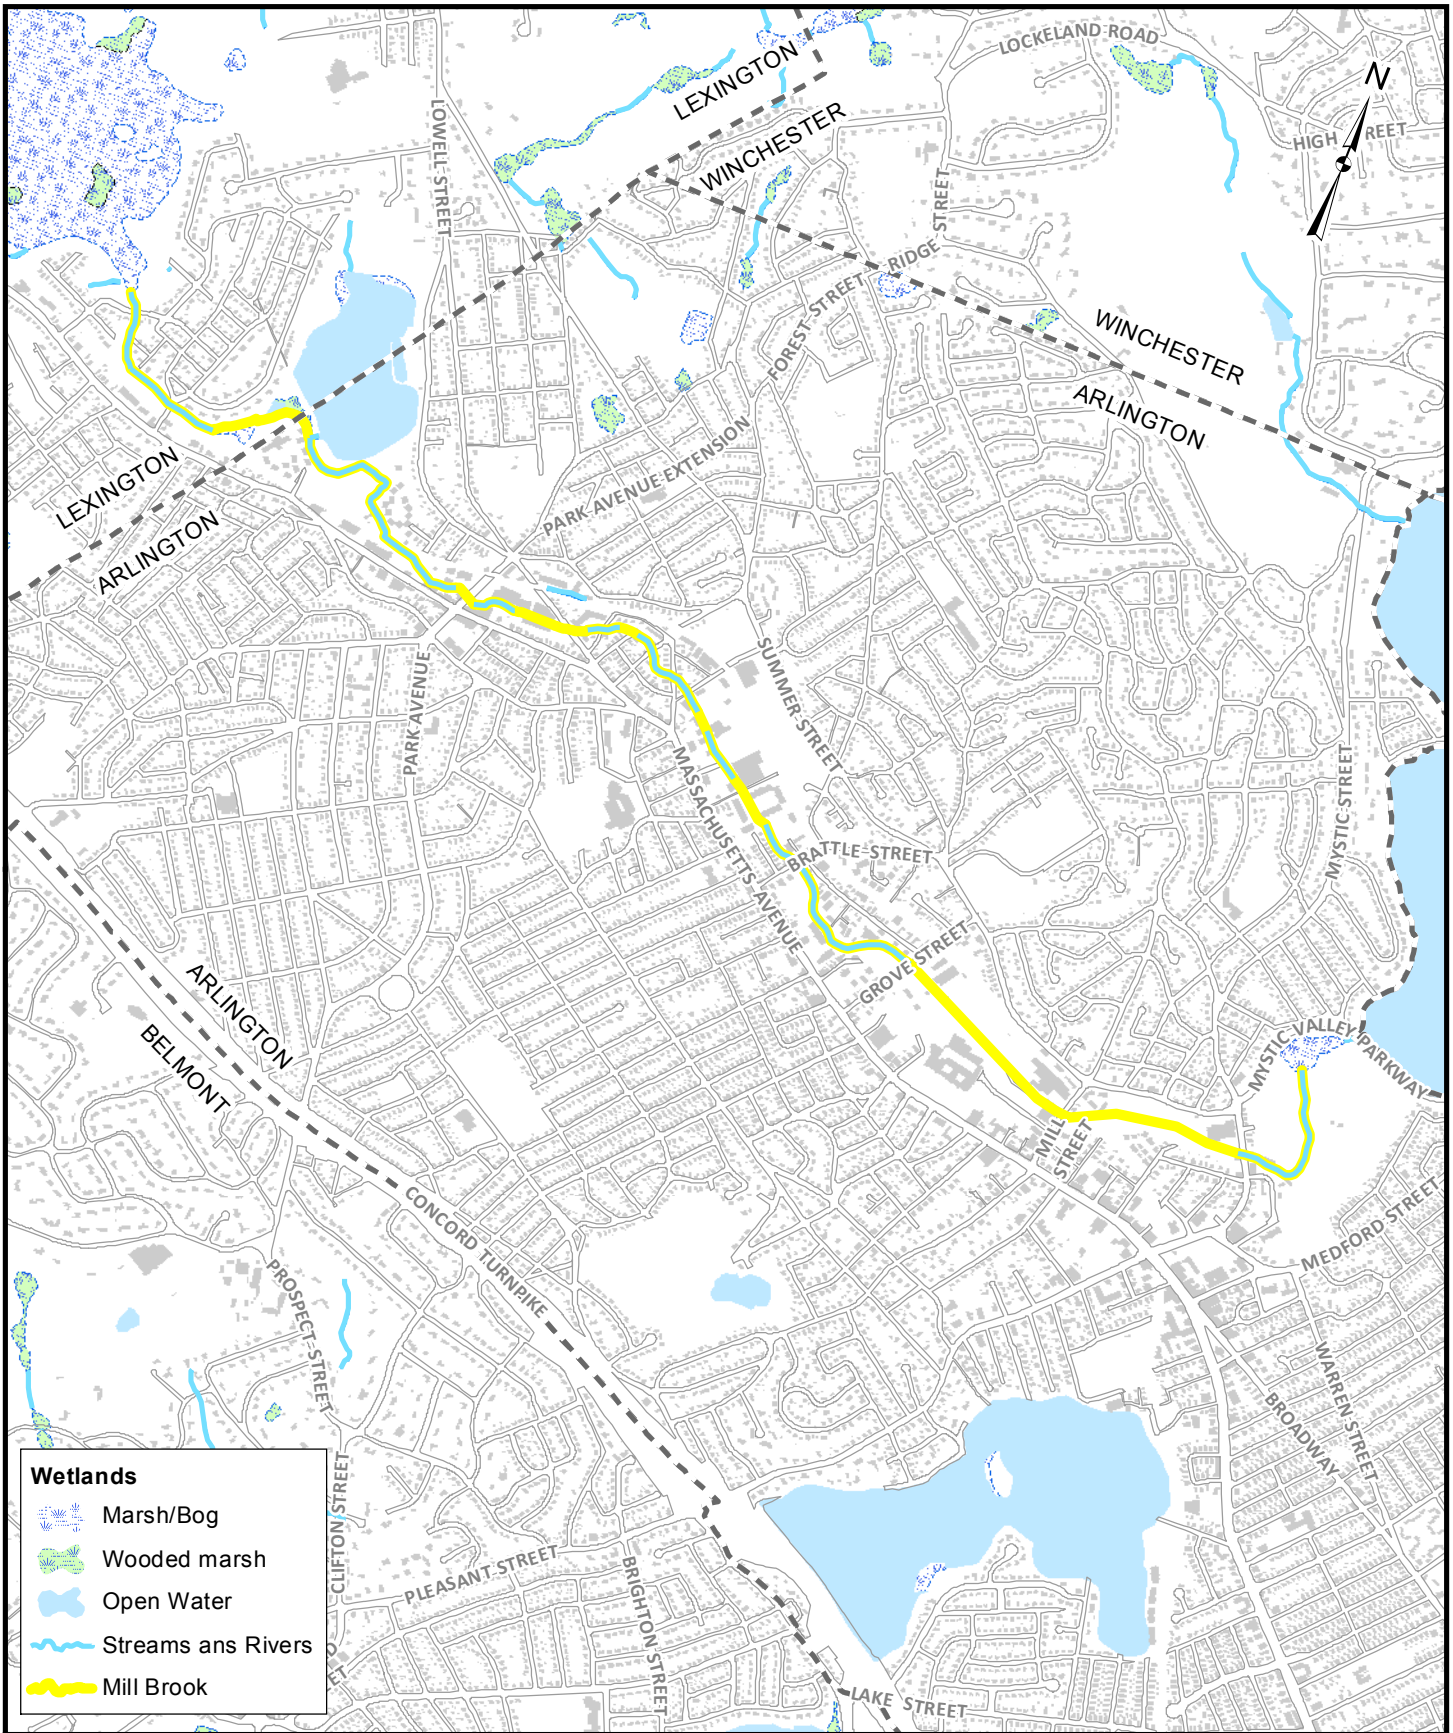

The Town of Arlington has initiated a program to evaluate the condition of the Mill Brook. This program will evaluate opportunities to mitigate flooding between Fottler Avenue and the Mystic Lakes.

The Town's consultant, Weston & Sampson Engineers, Inc., will be conducting a walking stream assessment survey of Mill Brook including outfall identification and condition assessment of existing infrastructure.

A two-person crew will perform the survey between August 11, 2015 and August 19, 2015. The work will be performed Monday through Friday, between 7:00 a.m. and 5:00 p.m.

Persons performing these inspections will be wearing bright safety vests with Weston & Sampson identification. Work will be conducted primarily within the banks of the brook.

The brook runs through many back yards and the crews may access these areas by walking along the stream bed or requesting private property access through the homeowner.

Wetlands

- Marsh/Bog
- Wooded marsh
- Open Water
- Streams and Rivers
- Mill Brook
